Index of subjects

Analytical electron microscopy, calibration standards, 143
Aortic endothelial cells, 229
Aphid, differential sensitivity of neurosecretory neurones, 483
Autoradiography, freeze-fracture, of plasma membrane, 453

Bipolar transistors, breakdown of, 315
Bipolar transistors, observation of emitter-collector pipes, 329
Breakdowns, electrical, correlation between transistors and precipitates, 315

Calibration standards for sodium analysis, 143
Caliper diameter, determination of mean, 421
Cathodoluminescence, SEM analyses, 367
Cell-biological specimens, method to handle, 429
Cell-cycle stages, preparation of monolayers cells, 187
Cells, red blood, membrane, autoradiography, 453
Cell renewal times, by DIC, 153
Cinemicrography, time lapse, 193
Chlorine analysis, 143
Comparative counts, of small particles, method to provide, 241
Critical point drying, phase separation in solvent systems, 237
Crystals, large single, X-ray topography, 383
Crystals, MgO, CdS, 367
Cytochrome *c* oxidase, dimensions of, 191

Differential interference contrast (DIC) microscopy, 153
Diffractometer, and microdensitometer, combined, 247
Dislocations, extended screw, networks, 83
  in semi conductors, 3
  misfit, supersaturation and climb of, 35
  nonradiative recombinations, 255
  TEM of, under high stress, 35
Distortions in heteroepitaxial structures, 375
Dopants, low solubility, 41
Double-heterostructure laser materials, EBIC of, 321

Eggs, calcified, demonstration of pores, 477
Electrical assessment of semiconductors, 275
Electrical properties, of dislocations, 3
Electron beam depth profiling, 291
Electron energy loss, spectroscopy, 389
Electron probe X-ray microanalysis, 471
EBIC, of laser materials and devices, 231
Energy spectra of dislocations, 23

Electron microscopy,
  biological, use of fast film, 127
  comparative counts, 241
  ion implanted silicon, 51
  microtwins, 89
  VPE GaInAs layer structures, 117
E. coli, freeze-fractured, 161
Exchange method, improved handling of cell specimens, 429

Faults, {113}, nature and origin of, 75
Fibrils, swollen hydrated cellulose, 177
Field emission gun, UHV, 351
Film, fast X-ray, 127
Films, epitaxial silicon, 89
Films, polycrystalline silicon, 97
Furnace annealing, 51

Gallium arsenide, EM studies of, 51
Gallium arsenide, microscopy of semi-insulating, 111
Germanium, displacement cascades, 67
  energy spectra of dislocations in, 23
  irradiated, nature of {113} faults, 75
  TEM of dislocations of, 13
Glutaraldehyde, effects of, 161
Glycerol, effect of, 161
Grain boundaries, characteristics of, for solar cell applications, 105

Heating stage, for a SEM, 463
Heteroepitaxial structures, distortions in, 375
High resolution time lapse cinemicrography 493

Immunoperoxidase histochemistry incubator, 447
Incubator, air-stream, for HR time lapse cinemicrography, 493
Incubator, construction of a close chambered, 447
Intestine, mouse, cell renewal times, 153
Invertebrates, pores in calcified eggs, 477
Ion microscopy, diffusible ion localization, 409

Laser annealing, 51
Laser materials and devices, EBIC, of 321
Laser, silicon, TEM of, 41
LEDs, infrared, 117
Liposomes, reconstituted, 191
Liver sections, freeze-dried, unfixed, 409

Mapping, minority carrier lifetime, 297
Membrane, autoradiography of red blood cell plasma, 453
Membranes, lipid bilayers, 221
Microdensitometry, scanning, combined with a diffractometer, 247
Micro plasma sites, in semiconductors, 263

Microtwins, EM study of, 89

Neurosecretory, and non-neurosecretory neurones, 483
Nuclei, lung, mean caliper diameter, 421

Pellet mould for bulk specimens, X-ray microanalysis, 489
Phase separation in solvent systems, 237
Pipes, emitter-collector, in bipolar transistors, 329
Pores, demonstration of, in eggs of vertebrates and non-vertebrates, 477
Potassium analysis, 143
Profiling, electron beam depth, in semiconductors, 291
Proteocephalus ambloplitis, SEM examination of, 443

Sapphire, EM study of microtwins, 89
Scanning electron microscopy,
  boron implanted silicon, 337
  analysis of cathodoluminescence, 367
  defects in GaAs substrate material, 343
  electrical assessment of, 275
  emitter-collector pipes, 329
  heating stage, 463
  minority carrier lifetime mapping, 297
  qualitative study of endothelial cells, 229
  scolex, examination of, 443
  time-resolved cathodoluminescence, 303
  UHV field emission gun, 351
Scanning optical microscope, for semiconductor materials and devices, 309
STEBIC, STEM, and ELS, correlation of, 263
Scolex, examination of, 443
Semiconductors,
  compound, III–V, 225
  electrical assessment, of, 275
  electron beam depth profiling, 291
  materials and devices, 309
  use of scanning optical microscope, 309
  structure and properties of dislocations, 3
Semi-insulating gallium arsenide, 111
Shape assumptions, method independent of, 421
Silicon,
  bipolars, 315
  boron-implanted, SEM–EBIC, 337
  dislocation networks, extended screw, 83
  displacement cascades, 67
  doped, 13
  doped, GaAs substrate material, 343
  electron beam annealed ion implanted, 61
  energy spectra of dislocations, in, 23
  films, TEM of, 97
  ion implanted, 51
  phosphorus-diffused, 35
  polycrystalline films, 105
Size determination of sonicated vesicles, 401
Sodium analysis, 143
Solar cell applications, 105
Sphere size distributions, improved tables for, 135
Spray-freezing method, 401
Streak technique, time resolved cathodoluminescence, 303
Stereometry, as aid to stereological analysis, 217
Supersaturation, interstitial, 35
Surface structure studies, 61

Thickness, section, effect of, 135
Tissue sections, ultra thin, phosphorus standards for, 471
Transmission electron microscopy,
  cross-sectional, for polycrystalline Si films, 97
  defects produced by displacement cascades, 67
  dislocations, 13
  emitter-collector pipes, 329
  silicon laser annealed, 41
  studies of defects in substrate material, 343
Transistors, bipolar, 329
Transistors, silicon bipolars, 315

Uranyl ions, interactions of, 221
UHV field emission gun, SEM, 351

VPE, GaInAs layer structures, use as infrared LEDs, 117
Vertebrates, pores in calcified eggs, 477
Vesicles, sonicated, size determination of, 401

Width standard, gold ball shadow, 191

X-ray film, fast, 127
X-ray microanalysis of tissue sections, 471
X-ray microanalysis in SEM, pellet mould for bulk specimens, 489
X-ray multiple diffraction, 375
X-ray topography of large single crystals, 383

Zn diffusion, 343
